G V PRAJWAL

Prajwalgv12345@gmail.com | Portfolio | GitHub | LinkedIn | LeetCode | CodeChef

Profile

Computer Science undergraduate building backend-heavy full-stack systems with TypeScript, Python, and PostgreSQL. Experienced in evaluating frontier AI coding agents on real open-source codebases, and an open-source contributor with four merged pull requests in API design, CI/CD, security, and cloud deployment.

Education

Indian Institute of Information Technology Dharwad *2023 – 2027*
B.Tech in Computer Science and Engineering GPA: 7.44/10
Minor in Cyber Security GPA: 8.29/10

Experience

AI Evaluation Engineer – Olympus *sept 2026 – Present*
Python, Go, TypeScript, Rust, Docker

- Authored long-horizon software-engineering tasks for evaluating frontier AI coding agents, each a reproducible issue, hidden test suite, and reference fix pinned to a real open-source repository (e.g., esbuild, textwrap, node-jsonc-parser).
- Researched and scoped task directions across **170+ open-source repositories** in Go, TypeScript, Rust, and Python, verifying prior art and building deterministic, offline Dockerized test harnesses.
- Calibrated task difficulty against multiple AI solvers and audited failing and passing runs for fairness, false positives, and test-suite strength.

Open Source Contributor – Noveum Orbit *Aug 2026 – Present*
TypeScript, Bun, GitHub Actions, VitePress

- Delivered **4 merged pull requests** in a production TypeScript/Bun monorepo, working through issue scoping, maintainer review, testing, and CI validation.
- Built an automated release workflow and release-note generator with paginated PR collection, deterministic commit ranges, idempotent publishing, orphan-tag recovery, pinned actions, and validation tests.
- Published a VitePress documentation site through GitHub Pages and improved documentation reliability with pinned link-checking CI and a canonical quick-start guide.

Projects

Multi-Client Portfolio and Order Management System ↗ *TypeScript, Bun, Prisma, PostgreSQL*

- Built a multi-client PMS-OMS with protected client, portfolio, broker-account, and order APIs backed by a relational Prisma/PostgreSQL data model.
- Implemented pre-trade risk checks, buy-order placement, order modification and synchronization, mock-broker execution, and audit logging; validated critical flows with repeatable API test scripts.

Darukaa Earth Geospatial Project Platform [Live] ↗ *React, FastAPI, PostgreSQL, Mapbox*

- Developed a full-stack geospatial dashboard with authentication, protected project CRUD, interactive terrain maps, and polygon-based land selection and area calculation.
- Deployed the web, API, and database services on Render and configured migrations, environment variables, Mapbox integration, and cross-origin access for the production setup.

Indian Market Risk Engine ↗ *Python, Streamlit, Plotly, scikit-learn*

- Engineered a risk model and interactive dashboard for Indian equity indices using volatility, drawdown, VaR/CVaR, fundamentals, and Isolation Forest-based anomaly detection.

Technical Skills

Languages: TypeScript, JavaScript, Python, Go, Rust, C++, C, SQL
Backend and Frontend: Bun, Node.js, Express, FastAPI, React, Next.js, REST APIs, Streamlit
Data and Infrastructure: PostgreSQL, MySQL, Prisma, Docker, GitHub Actions, Jenkins, Linux, Git
AI, Security and ML: AI agent evaluation, Trivy, scikit-learn, Pandas, Isolation Forest

Achievements

- Solved **400+ algorithmic problems** across LeetCode and other competitive-programming platforms.
